measuring instruments since 1911

## Mechanical Crankshaft Deflection Gauge

- To check alignment and deflection on all types of engines
- Easy adjustment of gauge position
- Compact and robust construction
- Measuring range: 60 - 300mm / 500 mm
- Ready to use package with case
- Precision technology

A deflection gauge for checking distortion of crankshafts. The use of the instrument enables the user to check the bearing alignment and deflection of the crankshaft.

The robust construction and the hardened measuring tips make it possible to use the instrument on all kinds of engines.

The deflection gauges can also be used to measure and indicate cylinder wear. To measure cylinder wear the hardened tips can be replaced with rounded tips that are available as an option.

### Measuring ranges:

Option I

Measuring range 60 mm - 300 mm

Option II

Measuring range 60 mm - 500 mm
